

Specialist Mortgage & Second Charge Lender

EFT Request Manager

User Guide & Reference Documentation

Version	1.0
Platform	Google Chrome / Microsoft Edge (required)
File Type	CSV (.csv) — stores all EFT request data

1. Overview

The EFT Request Manager is a browser-based tool for creating, tracking, and managing Electronic Fund Transfer (EFT) requests. All data is stored locally in a CSV file on a shared network drive, making it accessible to multiple team members without requiring a database or server.

💡 The application runs entirely in your web browser — no installation required. Open the HTML file in Chrome or Edge and you are ready to go.

1.1 Key Features

- Full workflow tracking from Pending through to Completed or Failed
- Multi-user support with automatic merge on save
- Export to CSV for sending to Finance
- Statistics dashboard with filtering by status, project, and date range
- All data stored in a plain CSV file — no special software required to read it

1.2 Browser Requirements

The EFT Request Manager requires the File System Access API, which is only available in:

- Google Chrome (version 86 or later) — recommended
- Microsoft Edge (version 86 or later)

⚠️ Firefox and Safari are NOT supported. The application will open but saving will not work.

2. Getting Started

2.1 Opening the Application

Double-click the EFT_Request_Manager.html file in Windows Explorer to open it in your default browser. If it does not open in Chrome or Edge, right-click the file and choose Open with → Google Chrome (or Microsoft Edge).

2.2 Opening a Data File

On the landing page you will see two options:

Option	When to use
 Open Existing File	Open a previously saved CSV file to continue working with existing records
 Create New File	Start a brand-new CSV file with no records

When you click Open Existing File:

1. A file picker dialog appears — navigate to your shared network drive and select the CSV file
2. Chrome will ask "Allow this site to edit files?" — click Allow. This is a one-time prompt per session and will not appear again until you restart Chrome
3. The file opens and all records are displayed in the table

 Always open the file from the shared network drive, not a local copy on your desktop, to ensure all team members are working with the same data.

2.3 The Application Layout

Once a file is open the screen is divided into:

Area	Description
Header bar	Pepper Money logo, app title, file name, and Open / New File / Save buttons
Stats bar	Six tiles showing record counts and total £ values for each status
Tab bar	Switch between the Requests table and the Statistics dashboard
Toolbar	Search box, status filter dropdown, Export button, and Add Request button
Table	All EFT request records with sortable columns and action buttons

3. The EFT Request Workflow

Every EFT request moves through a defined series of statuses. Each status requires a specific action from a specific person, and movement between statuses can only go in one direction.

3.1 Status Descriptions

Status	Who Acts	What it means
Pending	Requester	Record has been added but not yet checked by a second person
Checked	Checker	A second person has reviewed and verified the request details
Sent	Finance	The checked record was exported and sent to Finance (set automatically on export)
Completed	Completer	Finance has confirmed the transfer was completed successfully
Failed	Completer	The transfer was attempted but failed; requires investigation

⚠ Status only moves forward. A Checked record cannot be moved back to Pending, and a Sent record cannot be moved back to Checked.

4. Adding a New EFT Request

4.1 Opening the Add Form

Click the + Add Request button in the toolbar (top right of the requests table). The Add EFT Request modal window will open.

4.2 Completing the Form

The form is divided into three sections:

Section 1 — Request Details

Field	Required	Description
User	Yes	Your name or username — identifies who created the request (e.g. J.Smith)
Project	Yes	The project code or name this transfer relates to (e.g. PRJ-2026-001)
Amount (£)	Yes	The transfer amount in pounds sterling — numbers only, no £ symbol

Section 2 — Our Reference

Field	Required	Description
Pool	Yes	The pool account identifier (our internal reference, e.g. POOL-01)
Pool Account Number	Yes	Our pool account number for this transfer

Section 3 — Customer Details

Field	Required	Description
Customer Name	Yes	The full name of the customer receiving the transfer
Customer Sort Code	Yes	The customer's bank sort code in format 12-34-56
Customer Bank Account	Yes	The customer's bank account number

4.3 Saving the Record

Click Save Request. If any required field is empty, a warning modal will highlight it. Once saved, the record appears in the table with status Pending and is automatically saved to the CSV file.

☒ The record is saved to the CSV file automatically when you click Save Request — you do not need to click the main Save button after adding a record.

5. Checking a Record

5.1 Who Can Check

Any user can check a Pending record — but the checker should ideally be a different person to whoever created the request. The check button is only visible on Pending records.

5.2 How to Check

4. Find the Pending record in the table
5. Click the ☒ check button in the Actions column
6. The Check EFT Request window opens — all fields are locked and read-only so you can verify the details without accidentally changing them
7. Review all the details carefully
8. Enter your name in the Checker's Name field
9. Click Confirm Check

The record status changes to Checked and the checker's name and time of check are recorded automatically.

 Only Pending records have a Check button. If the ☒ button appears greyed out, the record has already been checked — hover over it to see who checked it and when.

6. Exporting Records to Finance

6.1 When to Export

Export is used to send Checked records to Finance for processing. Only records with status Checked are eligible for export. Pending, Sent, Completed, and Failed records can be included in other export types but are not the primary target.

6.2 How to Export

10. Click the  Export button in the toolbar
11. The Export Records window opens — choose one of three options:

Export Option	What it includes
All records	Every record regardless of status
Checked only	Only records with status Checked — the standard Finance export
Current filtered view	Exactly what is currently visible in the table

12. Tick the checkbox "Mark exported Checked records as Sent after export" if you want the status to update automatically
13. Click Export

A CSV file is downloaded to your computer with a timestamp in the filename (e.g. EFT_Export_2026-05-13T09-30.csv). Send this file to Finance.

☒ If you tick "Mark exported Checked records as Sent", the records are updated to Sent status in the main file automatically — you do not need to do this manually.

6.3 Sort Code Note

Sort codes (e.g. 12-34-56) are exported wrapped in quotes to prevent Excel from converting them to dates. If you open the exported CSV in Excel and the sort code still shows as a date, format the column as Text before opening the file using the Import Wizard (Data → From Text/CSV).

7. Completing or Failing a Record

7.1 When to Complete or Fail

Once Finance has processed a Sent record, the outcome must be recorded in the system. Only records with status Sent have a Complete/Fail button.

7.2 How to Complete or Fail

14. Find the Sent record in the table
15. Click the ✓ button in the Actions column
16. The Complete / Fail Request window opens — all original fields are locked and read-only
17. Select the outcome from the dropdown: Completed or Failed
18. Enter your name in the Completer's Name field
19. Click Confirm Outcome

The record status changes to Completed or Failed. The completer's name, outcome, and timestamp are recorded automatically.

⚠ A Failed record should be investigated. You may wish to create a new Pending record with corrected details once the issue is resolved.

8. Editing and Deleting Records

8.1 Editing a Record

Click the  edit button in the Actions column. The Edit EFT Request window opens with all fields editable. Make your changes and click Save Changes.

 Editing is available at all statuses, but use caution editing records that are already Checked, Sent, Completed, or Failed — the checker's and completer's details will remain unchanged even if you edit the core fields.

8.2 Deleting a Record

Click the  delete button in the Actions column. A confirmation modal will appear showing the record details. Click Delete to confirm. This action cannot be undone.

8.3 Viewing Full Record Details

Double-click the status badge of any record to open a read-only detail panel showing all fields, including check and completion details. This is useful for a quick overview without opening the edit form.

9. Saving Changes

9.1 Manual Save

Click the  Save button in the header. A confirmation modal will appear showing the filename. Click Save to write all changes to the CSV file on disk.

 After clicking Save in the modal, Chrome may display a permission bar at the top of the browser window saying "Allow this site to save changes to [filename]?". Click Save Changes to confirm. This only appears once per session.

9.2 Automatic Save

The following actions trigger an automatic background save without showing the confirmation modal:

- Marking a record as Checked
- Marking a record as Completed or Failed
- Deleting a record
- Marking records as Sent via the export process

9.3 Unsaved Changes Indicator

A small yellow dot appears next to the Save button when there are unsaved changes. This dot disappears after a successful save.

9.4 Multi-User Saving & Merge

If two people have the same CSV file open at the same time, the application handles conflicts automatically:

- When you save, the app first reads the current file from disk
- If another user has added records since you opened the file, those new records are merged into your session
- A toast notification appears: "Saved ✓ — merged X new records added by others"
- If two users edit the same record simultaneously, the last person to save wins on that record

 New records added by colleagues are always merged safely. The only risk is two people editing the exact same existing record at the same time — in practice this is rare.

10. Searching and Filtering

10.1 Search

Type in the search box to filter records in real time. The search covers: index number, user, project, pool, pool account number, customer name, sort code, bank account, amount, date added, checker name, completer name, and status.

Click the ✕ button at the right of the search box to clear the search.

10.2 Status Filter

Use the dropdown next to the search box to filter by status: All records, Pending, Checked, Sent, Completed, or Failed.

10.3 Sorting

Click any column header to sort by that column. Click again to reverse the sort order. An arrow indicator shows the current sort direction.

11. Statistics Dashboard

11.1 Opening Statistics

Click the  Statistics tab above the toolbar. Statistics update immediately whenever filters change.

11.2 Filter Bar

At the top of the Statistics tab there is a filter bar with four controls:

Filter	Description
Status checkboxes	Tick or untick individual statuses — any combination is allowed
Project	Select a single project or "All projects"
Date Added — From	Only include records added on or after this date
Date Added — To	Only include records added on or before this date
↶ Reset	Clear all filters back to defaults

The summary pill (top right of the filter bar) shows the count and total £ value of the filtered selection.

11.3 Chart Tabs

The Statistics tab has three inner tabs:

Tab	Content
 Breakdown Tables	Four tables: By Project, By User, By Pool, and By Status — each showing count, total value, and a status breakdown for each group
 Over Time	Stacked bar chart showing records added each month, colour-coded by status, with a legend
 Amounts	Bar chart showing how many records fall into each value band (< £500, £500–£1k, etc.) with total, average, min, and max values

12. Stats Bar

The six tiles at the top of the screen always reflect the totals across all records (not filtered). Each tile shows:

- The count of records at that status
- The total £ value of those records

Tile	What it shows
Total	All records across all statuses

Tile	What it shows
Pending	Records awaiting a check
Checked	Records verified and ready to export to Finance
Sent	Records exported to Finance, awaiting outcome
Completed	Transfers confirmed as successful
Failed	Transfers that did not complete successfully

13. CSV File Format

The data file is a standard comma-separated values (CSV) file that can be opened in Microsoft Excel, Google Sheets, or any text editor. It can be read by anyone even without the EFT Request Manager application.

13.1 Column Reference

Column	Type	Description
Index	Number	Unique auto-incrementing record number
Time Added	DateTime	When the record was created (YYYY-MM-DD HH:MM:SS)
Time Edited	DateTime	When the record was last modified
User	Text	Name of the person who created the request
Pool	Text	Our internal pool account identifier
Pool Account Number	Text	Our pool account number
Customer Name	Text	Customer's full name
Customer Sort Code	Text	Customer's sort code (quoted to prevent date conversion)
Customer Bank Account	Text	Customer's bank account number
Amount	Number	Transfer amount in pounds sterling
Project	Text	Project code or name
Status	Text	One of: pending, checked, sent, completed, failed
Checker Name	Text	Name of person who checked the record
Time Checked	DateTime	When the record was checked
Completer Name	Text	Name of person who completed/failed the record
Time Completed	DateTime	When the outcome was recorded
Outcome	Text	completed or failed

14. Troubleshooting

Issue	Solution
Save button does nothing	Make sure you are using Chrome or Edge. Firefox and Safari do not support file saving.
Sort code shows as a date in Excel	Use the Excel Import Wizard (Data → From Text/CSV) and set the sort code column to Text format during import.
"Permission denied" when opening	Click Allow when Chrome asks for file access. This must be done each browser session.
Records added by colleague are missing	Your colleague may not have saved yet, or you opened the file before they saved. Click  Save to trigger a merge refresh.
Check button not visible	The  button only appears on Pending records. Checked, Sent, Completed, and Failed records do not have this button.
Complete/Fail button not visible	The  button only appears on Sent records. Check the record status — it must be Sent before it can be completed or failed.
Statistics charts are blank	Check your filter bar — all status checkboxes may be unticked, or the date range may exclude all records. Click  Reset.
Application does not load	Ensure the HTML file is opened in Chrome or Edge, not Internet Explorer or Firefox.

15. Quick Reference

Action Buttons

Button	Available when	Action
	Any status	Edit record details
	Pending only	Open the Check window — verify and enter checker name
	Sent only	Open the Complete/Fail window
	Any status	Delete record (with confirmation)

Keyboard Tips

- Press Escape to close any open modal
- The search box updates the table as you type — no need to press Enter
- Click a column header once to sort ascending, again for descending
- Double-click the status badge on any row to see full read-only record details

Contact & Support

For issues with the application, contact your IT team or the person who set up the EFT Request Manager for your team.
